Sovereign Governance Core Boundary

WARNING: This document defines the explicit boundary of the Sovereign Governance Core. Nothing outside the directories listed below has authority, enforcement power, or decision weight.

Core Components

The following directories and their sub-contents constitute the **Sovereign Governance Core**:

- `/infra/core/` (from `sovereign-infra`)
- `/infra/safe-os/` (from `SAFE-OS`)
- `/apps/elite/` (governance components from `sovereign-sanctuary-elite`)

Non-Core Components

All other directories and files within this monorepo are considered **non-core**. This includes, but is not limited to:

- `/docs/`
- `/apps/web-stack/`
- `/apps/blade2ai/`
- `/agents/`
- `/modules/`
- `/domains/`

Authority & Misuse

- **Authority:** Only components within the **Sovereign Governance Core** can be considered for authoritative actions or decisions.

- **Misuse:** Citing, executing, or treating any non-core component as authoritative is a misuse of the system and will be logged.

This boundary is non-negotiable and is enforced to prevent accidental activation and authority creep.
